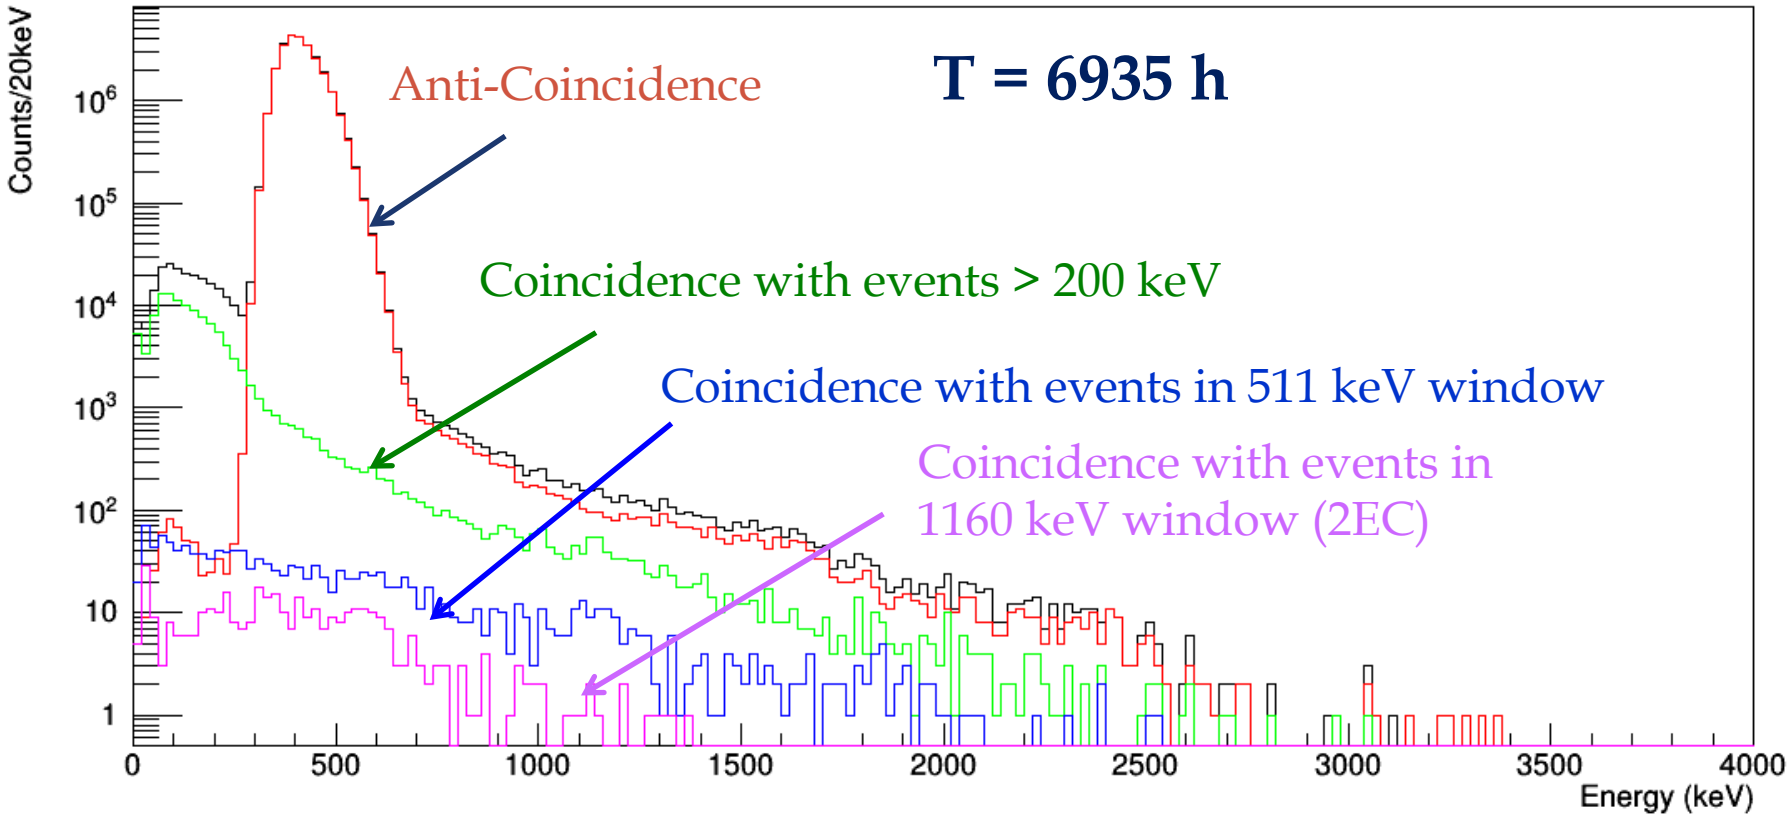
ENERGY SPECTRA OF ^{106}Cd



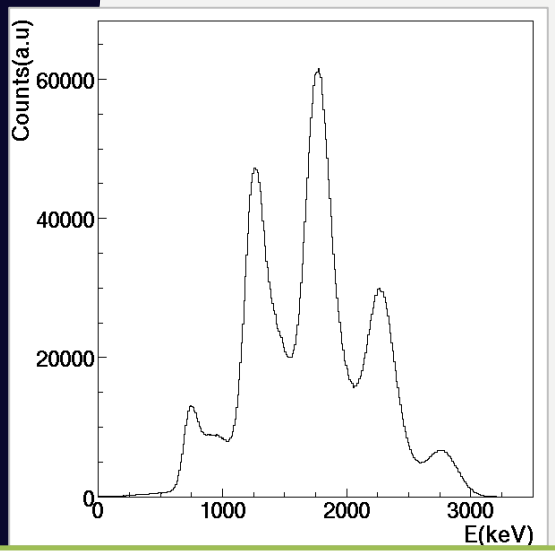
The energy spectra accumulated over **6935 h** by the $^{106}CdWO_4$ detector:

- in anticoincidence with the $^{nat}CdWO_4$ detectors
- in coincidence with event(s) in at least one of the $^{nat}CdWO_4$ detectors with energy:
  - E > 200 keV
  - E in energy window around 511 keV
  - E in energy window around 1160 keV

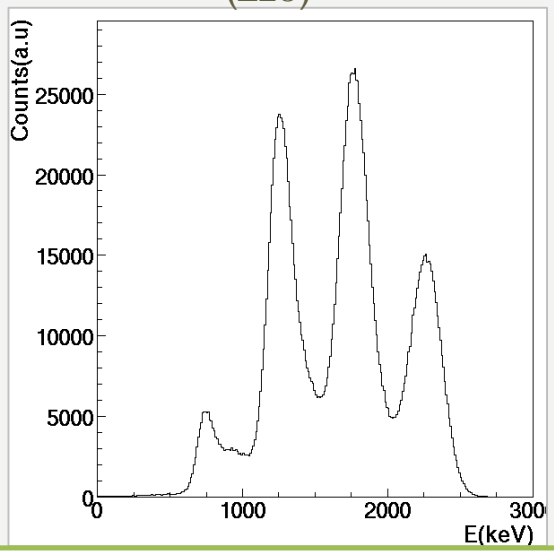
ESTIMATION OF SENSITIVITY

Expected signal for **^{106}Cd $0\nu2\beta(0^+ \rightarrow 0^+)$**:

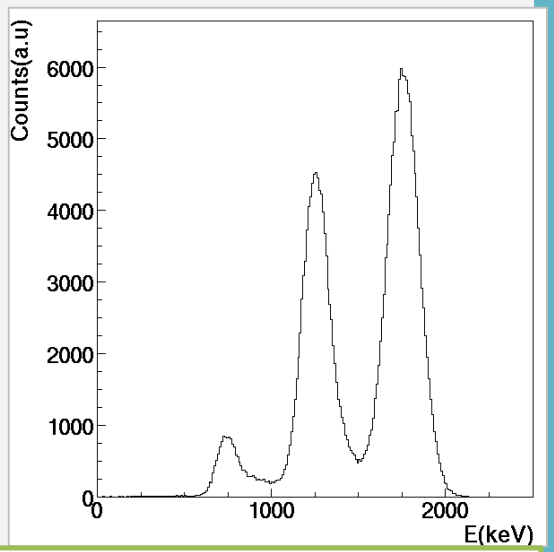
Spectrum of $^{106}CdWO_4$ detector



Spectrum of $^{106}CdWO_4$ detector when one of the two $CdWO_4$ detectors detects γ of 511 keV ($\pm2\sigma$)



Spectrum of $^{106}CdWO_4$ detector when both the $CdWO_4$ detectors detect γ of 511 keV ($\pm2\sigma$)



Sensitivity after 1yr in the hypothesis of about 30 background counts in [0.-3.] MeV:

$0\nu\varepsilon\beta^+$ (g.s.): $T_{1/2} \approx 5 \times 10^{21}$ yr

$2\nu\varepsilon\beta^+$ (g.s.): $T_{1/2} \approx 3 \times 10^{21}$ yr

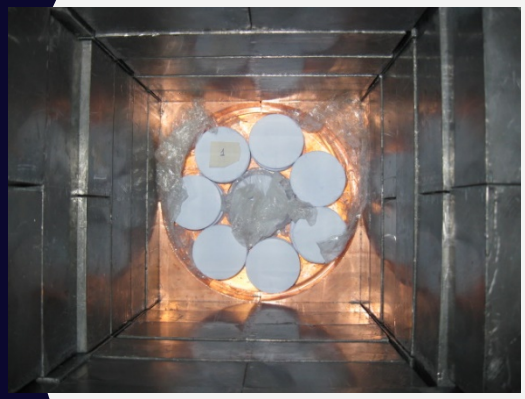
$2\nu2\beta^+$ (g.s.): $T_{1/2} \approx 2 \times 10^{21}$ yr

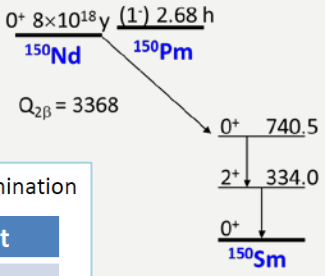
In the region of theoretical predictions: $T_{1/2} \sim 10^{20}$–10^{22} yr

Note that, up to now, 2ν mode of the $2\beta^+$ processes has not been detected unambiguously: there are only indications for ^{130}Ba and ^{78}Kr

Running and future experiments on HPGE

- Experiment running since February 2015 with deeply purified Nd_2O_3 sample (2381 g) in GeMulti detector to investigate 2β decay of ^{150}Nd to excited levels of ^{150}Sm:
  - ⇒ Background rate in the region of expected peaks (334.0 keV and 406.5 keV) ≈ 2 counts/keV/d
  - ⇒ Expected $T_{1/2}$ sensitivity after 500 days of measurements: 1.3×10^{20} yr (90%CL)





Improvement of Nd_2O_3 radioactive contamination

Contamination	Before [1]	Present
^{40}K	46	< 4
^{214}Bi (^{226}Ra)	1.1	<0.4
^{228}Ac (^{228}Ra)	0.9	<0.4

$$T^{2\nu2\beta}_{1/2} = [1.33^{+0.36}_{-0.23}(\text{st})^{+0.27}_{-0.13}(\text{syst})]\times10^{20}\ \text{yr}\ [1]$$

$$T^{2\nu2\beta}_{1/2} = [1.07^{+0.45}_{-0.25}(\text{st}) \pm 0.07(\text{syst})]\times10^{20}\ \text{yr}\ [2]$$

8 events of the decay are observed over 16375 in coincidence with the HPGe. The half-life:
